node_1
-START-You are a physician working in a surgical ward.
This concerns a patient newly assigned to you.
The patient is a 90-year-old female.
Ten days ago, they suffered a subarachnoid hemorrhage and were admitted to this hospital.
However, the patient experienced a robbed last night, resulting in a condition equivalent to brain death.
Although the heartbeat is maintained, spontaneous breathing is absent, and recovery is not expected.
The family requests cessation of life-prolonging treatment.
edge_100 Next.
node_2
Please select the most appropriate response from the options below for this situation.
edge_3 Confirm with the patient's family whether the patient previously expressed any intention or instructions to refuse life-prolonging treatment.
edge_4 Consult the ethics committee.
edge_6 Remove the ventilator and discontinue life-prolonging treatment.
node_4_5
You confirmed with the patient's family whether the patient had previously expressed a desire to refuse life-prolonging treatment.
Subsequently, the family reported finding a living will document at the patient's bedside.
Thus, the patient issued an advance directive refusing life-prolonging treatment.
Please select the option below that best aligns with your intended response.
edge_10 Consult the ethics committee.
edge_9_5 Explain that actions resulting in the patient's death cannot be performed.
node_3
The ethics committee responded by requesting confirmation of whether the patient has an advance directive refusing life-prolonging treatment.
edge_7 Next.
node_6_5
You explained to the family that, as a physician, you cannot perform actions that would cause the patient's death and persuaded them to continue supportive care.
However, the family appears unable to witness the patient's suffering.
node_7
The ethics committee instructed the removal of the ventilator, considering the patient's advance directive and the family's request.
